SUMMARY

Applied AI engineer with practical experience building LLM evaluation systems, agent-oriented data pipelines, and end-to-end AI applications. Strong in translating ambiguous model behavior into measurable quality signals, production-ready validation workflows, and customer-facing acceptance criteria.

EDUCATION

AWS Certified Solutions Architect - Associate (SAA-C03) Expected 07/2026

University of California, Los Angeles, *Los Angeles, CA* 09/2022 - 06/2024

Master of Applied Statistics and Data Science GPA: 3.88/4.00

University of Illinois at Urbana-Champaign, *Urbana-Champaign, IL* 08/2019 - 05/2022

Bachelor of Science in Statistics (minor in Mathematics) GPA: 3.59/4.00

SKILLS

- **Solution Delivery:** Requirement translation, stakeholder collaboration, workflow automation, domain validation, demo delivery
- **Applied AI Deployment:** LLM applications, multi-agent workflows, LangChain/LangGraph/CrewAI, MCP
- **AI Evaluation & Reliability:** Benchmark design, business-aligned metrics, failure analysis, ablation studies
- **LLM Data & Training:** SFT/RL workflows, synthetic data pipelines, trajectory validation, data quality control
- **Engineering:** Python, PyTorch, Git, Linux, Docker

EMPLOYMENT

AI Engineer | Huawei, Shenzhen, China 10/2024 - Present

- Led **business-oriented LLM benchmarking** across pre-training and post-training workflows, covering **60+ benchmark** datasets and integrating open-source plus internal evaluation frameworks; improved evaluation throughput by **about 3x** under fixed resource constraints through parallel execution and s**ystematic failure analysis.**
- Built **SFT/RL data pipelines** for complex reasoning and agentic tool-use tasks, including API/MCP integration, trajectory synthesis, and quality-control workflows; contributed **200K+** h**igh-quality training samples** that improved key evaluation metrics by **40%+** and reached performance comparable with leading open-source models on mainstream benchmarks.
- Implemented **automated validation for synthetic agent trajectories**, auditing code complexity, tool-call correctness, and task completion quality; filtered and repaired about **30% low-quality samples**, driving a **5% benchmark improvement** and reducing downstream training noise.
- Partnered with model, data, and evaluation teams to translate **model failure modes** into **actionable data requirements, validation rules, and iteration priorities** for large-scale LLM development.

AI/Data Analyst Intern | Palo Alto City Council (Office of Greg Tanaka), Palo Alto, CA 03/2024 - 07/2024

- Built a backend for a AI assistant using a **LangGraph-based agent architecture**; designed **prompt workflows**, integrated **conversational memory**, and developed **20+ custom LangChain-compatible tools**, exposing agent through FastAPI API.
- Partnered with **frontend engineers** and **end users** to define chatbot requirements and automate civic information-access workflows, improving team efficiency while ensuring response quality, tool reliability, and frontend integration readiness.

AI Data Intern | TCL, Shanghai, China 08/2023 - 09/2023

- Collaborated with **algorithm engineers, client stakeholders, and domain experts** to translate customer-service and smart-device control workflows into validation cases, demo scenarios, and user acceptance criteria.
- Created **40+ internal datasets** for quantitative model assessment, acceptance testing, and deployment-readiness review.
- Gathered **high-risk edge cases** from client and domain-expert feedback, improving the reusable LLM evaluation pipeline for future demos and customer deployments.
